DETAILED ACTION

1. Amendment filed on 1/7/05 has been received.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 31-35,37 and 39-43 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hester (U. S. Patent no. 5,352,305) in view of Jacke (U. S. Patent no. 3,274,033).

Hester discloses the use of impact deformation (shot peening) on a brake drum in order to improve the surface characteristics, improving performance and durability by reducing the tensional residual stress (see column 2 lines 23-25). Hester does not teach the use of ultrasonic reworking. Jacke teaches the use of ultrasonic impact deformation to reduce tensile residual stress in order to reduce crack propagation and failure in metals generically. It would have been obvious to one of ordinary skill in the art at the time the invention was made to use ultrasonic impact deformation as taught by Jacke in the reworked brake drum of Hester in order to provide greater durability and performance.

Regarding claims 35,39,40, It would have been obvious to one of ordinary skill in the art at the time the invention was made to have the specific dimensions and characteristics claimed as such is merely a design choice.

Response to Arguments

4. Applicant's arguments filed 1/7/05 have been fully considered but they are not persuasive. Applicants argue that neither Jacke nor Hester teach an ultrasonically reworked brake drum or rotor. That argument is irrelevant because the combination of Jacke and Hester teaches an ultrasonically reworked brake drum or rotor. The applicant admits that both Jacke and Hester intend to relieve residual stress. The examiner notes that Jacke discloses in column 3 lines 8-9 that the method made be used on any solid not just weldments.

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
